

User macro goodies

Sharing some user macros for Confluence we have, which help us in our day to day work

- [Attachments list](#) — Simple user macro to shows page's attachments with metadata (ID - title - version)
- [Custom expand macro](#) — This is a custom expand macro that works great with ConfiForms dialog mode forms
- [Div container](#) — Simple macro to place your contents in an HTML div container
- [Hide comments](#) — Simple macro to hide Confluence comments from page
- [Multi-page view](#) — This macro emulates a multi-page view for the contents. Very useful when used in Combination with ConfiForms custom layout
- [Page watermark](#) — Shows watermark on the page
- [Render contents if the user is in security group](#) — This macro renders it's content only if current user is in the configured security group
- [Render link to self](#) — Creates a link to page itself
- [Reverse comments](#) — Reverses comments order on the page
- [Show current timestamp on the page](#) — This simple user macro renders current timestamp on the page (please note that it uses server's time)
- [Simple link](#) — This a user macro to create a simple link in Confluence - this is sometimes very needed in Confluence, especially when you want to have a "parametrized" link
- [Sticky box](#) — This macro renders a "sticky box" at the position you say with the contents you put inside the macro body

Macros are provided as-is, without any warranty or support. Feedback is very welcome! Use our [Support Request Form](#) to share your feedback
